

2-Way 105HC Filling Station

MODEL # 980006

OVERVIEW

The 2-Way 105HC Filling Station has a water flow rate of 1 GPM @ 40 PSI and is a "high concentrate" 2-chemical or two ratio proportioner for filling smaller containers with strong solutions using a trigger gun. This venturi injection system uses city water pressure (40 - 80 PSI) to draw and blend a high concentration of chemical into the water stream to create up to 1:1 dilution ratios.

Key Features

- Achieves strong dilution ratios, up to 1:1 (with water thin chemicals)
- Weaker ratios are controlled by precision metering tips
- Designed to apply 2 different chemicals or 2 different concentrations on the same chemical
- Water flow rate of 1 GPM @ 40 PSI for filling smaller containers and equipment
- Eliminates manual mixing and optimizes chemical utilization, employee safety and labor efficiency
- Dispenses through a trigger gun to prevent the unit from running unattended
- Extended length hose to fill large equipment at a distance
- Chemical resistant wetted components ensure years of outstanding performance with minimal maintenance
- Industrial-strength design holds up in tough environments
- Draws chemical concentrate from any sized container(s)
- Available with a higher flow rate (#980008)
- See other chemical management systems in [Catalog 9](#)
