Boot Scrub Station

MODEL # 976970

OVERVIEW

The Boot Scrub Station removes coarse and fine particulate from deep-tread boots or more smooth-soled footwear, using stainless steel scraping teeth and fine-bristled polypropylene brushes made of FDA compliant material. The Boot Scrub Station works well for scrubbing footwear prior to sanitizing before entering sensitive food processing areas, or for clearing away particulate accumulated while working in food processing or farming operations or involvement in gardening or other outdoor activities. Features include a removable stainless steel handle for personal support and a stainless steel base with pre-drilled holes for fastening the unit in place.

Key Features

- Angled brushes remove finer particulate from soles and sides of footwear to help prevent cross-contamination into sensitive areas
- Brushes flip up to expose scrapers at right angles to the brushes
- Stainless steel teeth scrape away course or “caked on” matter from soles
- Stainless steel base offset from the ground
- Pre-drilled holes in base for fastening unit in place
- Two easily replaceable (readily available) brushes
- Brushes made with FDA compliant materials
- Polypropylene bristles for durability and chemical resistance
- Removable support handle
- Handle fabricated from solid, stainless steel rod
- Chemical resistant construction allows cleaning chemicals to be applied to footwear prior to or while using the Boot Scrub Station

Includes

- Stainless steel base
- Stainless steel scrapers with teeth
- Stainless steel handle/support
- Two angled brushes
