

Lafferty Equipment Manufacturing, LLC Installation & Operation Instructions

Model # 969939 · Model 255 Airless Foamer

REQUIREMENTS

Chemical Concentrate

Water

Temperature	up to 160°F
Pressure	20 - 100 PSI
Flow	1.25 GPM @ 40 PSI
Supply Line	1/2"

OPTIONS

Stainless Steel Hose Racks

Large Stainless Steel Hose Rack	# 224150
Small Stainless Steel Hose Rack	# 224145

Inlet Garden Hose Adapter or QD Plug

GH Adapter, NPB, FGH x 1/2" MPT	# 102027
QD, SS, Plug, 1/2" MPT	# 350459

Alternate Check Valve - EPDM Standard

Check Valve, Chemical, PP/Viton, 1/4"	# 491315

**WARNING! READ ALL
INSTRUCTIONS BEFORE
USING EQUIPMENT!**

OVERVIEW

The Model 255 Airless Foamer is a unique medium volume hose-end foam gun for diluting and applying foaming chemicals to any surface. This unit uses standard city water pressure to draw chemical concentrate from a user-supplied chemical container and blend it into the water stream. The accurately diluted solution flows through the foam wand to create a clinging, wet foam which is then projected on to any surface up close or at distances up to 12 feet. This unit includes a machined polypropylene jug lid, threaded to fit 1 gallon jugs and the pull-up spout of many 5 gallon jugs for larger jobs that require extended foaming time.

SAFETY & OPERATIONAL PRECAUTIONS

- When connecting to a potable water supply follow all local codes for backflow prevention.
- For proper performance do NOT modify, substitute nozzle, hose diameter or length.
- Manufacturer assumes no liability for the use or misuse of this unit.
- Wear protective clothing, gloves and eye wear when working with chemicals.
- Always direct the discharge away from people and electrical devices.
- Follow the chemical manufacturer's safe handling instructions.
- NEVER mix chemicals without first consulting chemical manufacturer.

TO INSTALL (REFER TO DIAGRAM ON NEXT PAGE)

If you are connecting to a potable water supply follow all local codes for backflow prevention.

1. Connect 1/2" threaded inlet to water supply (garden hose adapter or QD plug optional).
2. Select and install metering tip.
3. Cut a length of pick-up tube to suit the depth of your chemical container and affix the strainer to one end. Connect the other end of this piece to the hose barb on the underside of the jug lid.
4. Screw the jug lid onto your jug of chemical concentrate.
5. Connect pick-up tube from the hose barb on the top of the jug lid to the check valve on the airless foam wand (see diagram).

OVERVIEW & SETUP VIDEO
<https://vimeo.com/515352837>

Set the chemical dilution ratio by threading one of the color coded metering tips into each chemical check valve. See chemical labels for dilution ratio recommendation or consult your chemical supplier.

- For the strongest dilution ratio do NOT install a colored metering tip.
- The dilution ratios in the metering tip chart are based on water thin chemicals with a viscosity of 1CPS.
- Thicker chemicals will require a larger tip than the ratios shown in the chart.
- Application results will ultimately determine final tip color.
- Select the tip color that is closest to your desired chemical strength and thread it into the tip holder. **DO NOT OVER-TIGHTEN.**
- Push the chemical tube over the check valve barb and place the suction tube in the chemical concentrate.
- If necessary, cut suction tube(s) to length before attaching suction strainer.

TO OPERATE

1. Connect 1/2" threaded inlet to water supply (garden hose adapter or QD plug optional).
2. Select and install metering tip.
3. Connect pick-up tube to the wand/nozzle and screw the jug lid onto your jug of chemical concentrate.
4. Hold the gun and direct the discharge in a safe direction. Pull the trigger to begin application.
5. Make final metering tip adjustments based on application results. Try the next larger sized metering tip until the results are acceptable. In some case when the chemical is extra thick you may have to dilute it *slightly*.
6. When application is complete, release the trigger.

METERING TIP SELECTION

METERING TIP COLOR	OZ/MIN	DILUTION RATIO @ 40 PSI
Brown	0.56	286:1
Clear	0.88	182:1
Bright Purple	1.38	116:1
White	2.15	74:1
Pink	2.93	55:1
Corn Yellow	3.84	42:1
Dark Green	4.88	33:1
Orange	5.77	28:1
Gray	6.01	27:1
Light Green	7.01	23:1
Med. Green	8.06	20:1
Clear Pink	9.43	17:1
Yellow Green	11.50	14:1
Burgundy	11.93	13:1
Pale Pink	13.87	12:1
Light Blue	15.14	11:1
Dark Purple	17.88	9:1
Navy Blue	25.36	6:1
Clear Aqua	28.60	—
Black	50.00	—
No Tip Ratio Up To:		6:1
The dilution ratios above are approximate values. Due to chemical viscosity, actual dilution ratios may vary.		
FORMULA		
$GPM \times 128 \div \text{Desired Dilution Ratio} = \text{oz/min}$ <ul style="list-style-type: none"> • See Unit Flow Rates chart for GPM • Use 20 for 20:1 dilution ratio, 30 for 30:1, etc. • Match calculated ounces per minute (oz/min) to nearest oz/min in Metering Tip Selection chart. 		

UNIT FLOW RATES

PSI	GPM
35	1.17
40	1.25
50	1.40
60	1.53
70	1.65
80	1.77
90	1.88
100	1.98

Troubleshooting Guide

Problem	Possible Cause / Solution	
	Startup	Maintenance
A) Unit will not draw chemical	1, 5, 6, 7	9, 10, 11, 12, 13, 14
B) Foam does not clean or project foam properly	2, 4, 5, 7, 8	9, 10, 11, 12, 13, 14
C) Using too much chemical	3	

Possible Cause / Solution	
Startup	Maintenance
<ol style="list-style-type: none"> 1. Chemical tube is not installed <ul style="list-style-type: none"> ◦ Ensure chemical tube is on 2. Not enough chemical - metering tip too small <ul style="list-style-type: none"> ◦ Install larger metering tip 3. No metering tip installed or metering tip too large <ul style="list-style-type: none"> ◦ Install smaller metering tip 4. Improper chemical <ul style="list-style-type: none"> ◦ Ensure product is recommended for foaming and the application. 5. Chemical tube not immersed in chemical or chemical depleted <ul style="list-style-type: none"> ◦ Immerse tube or replenish 6. Water supply hose kinked <ul style="list-style-type: none"> ◦ Straighten the hose 7. Water pressure or water volume too low causing poor chemical pick up <ul style="list-style-type: none"> ◦ Increase water pressure or water volume 8. Soil has hardened on surface; always rinse before it dries <ul style="list-style-type: none"> ◦ Reapplication may be necessary 	<ol style="list-style-type: none"> 9. Metering tip partially blocked <ul style="list-style-type: none"> ◦ Clean or replace metering tip 10. Chemical tube stretched out or chemical tube is not on <ul style="list-style-type: none"> ◦ Cut off end of tube or replace tube 11. Vacuum leak in chemical pick-up connections <ul style="list-style-type: none"> ◦ Tighten the connection 12. Water strainer clogged or missing/injector inlet orifice clogged <ul style="list-style-type: none"> ◦ Clean or replace strainer; check/clean inlet orifice for obstructions. DO NOT DRILL OUT. 13. Hard water scale or chemical build-up may have formed in the body causing poor or no chemical pick-up <ul style="list-style-type: none"> ◦ Follow Preventive Maintenance instructions below, using hot water and/or de-scaling acid. When there is no draw at all, carefully remove fittings and soak entire body in de-scaling acid.

PREVENTIVE MAINTENANCE: When the unit will be out of service for extended periods, place chemical tube(s) in water and flush the chemical out of the unit to help prevent chemical from drying out and causing build-up. Periodically check and clean chemical strainer and replace if missing.
